

# Outside paving

Logistic area Westfields, Oirschot (NL)

<b>Application</b>	Outside paving
<b>Object</b>	Westfields Logistics
<b>Size</b>	6,800 m <sup>2</sup>
<b>Country</b>	Netherlands
<b>Year</b>	2019
<b>Fiber</b>	Fibrofor Diamond

## Description

Construction of a new outside paving area in front of the distribution center «Westfields» for the «DPD Nederland» logistic company. Crack reduced design and highly frequented truck traffic loads have specified the general conditions. The joint distance of 8.00 x 4.62 m was adapted perfectly for a concrete paver. In addition the customer wanted a risk-free solution consisting of a high quality fibre in combination with a static design based on Eurocode standards.

## Key advantages of the Fibrofor Diamond Solution

- Cost reduction (shorter construction time, no steel mesh installation)
- Reduction of CO2 footprint, due to use synthetic fibres instead of steel reinforcement
- No surface corrosion, due to use of synthetic fibres
- Tailor made static calculation based on the latest standards
